A summary connected to its evidence

I explored feedback layouts, widget families and content density so people could inspect the basis of a summary and find a useful next action.

Original design iteration. About Me web/server changes released September 2, 2026; this pictured variant is not claimed as the final released layout.

A comparison needs a careful explanation

The caption describes how often a topic appears in a cohort. It avoids turning a difference into an unsupported performance judgment.

Original interface design with example data. No measured performance result is shown.

Recovery depends on what happened

An interrupted answer and a lost connection leave different information available. I designed their messages and actions, then annotated the behavior for engineering.

Original mobile designs and handoff. No claim that the pictured states are shipped.

A finding becomes a visible recommendation

The audit identified vague login feedback. I recommended locating the error beside the relevant field so people could see what to correct.

Original proposed interface. This is evaluation and design guidance, not a measured conversion improvement.

Learning experience informs the interface

At ASU, I developed learning materials and proposed AI workflows with mentor review.

At Oppia, I questioned autosave and save-on-exit before finalizing dialog guidance.

My Coursera lesson makes iteration a practice activity.

The screenshot shows a Coursera lesson slide. At the top left, it says 'TASK OBJECTIVE' and at the top right, the 'coursera' logo. The main title is 'Task 3' in blue, followed by 'Goals' in bold black. Below that is the subtitle 'Iteratively Transform Content Using AI' in blue. A bulleted list contains three items: 'Use ChatGPT to create an initial draft and make iterative refinements.', 'Practice refining drafts using different prompt techniques and feedback loops.', and 'Analyze how each iteration impacts content quality and alignment with goals.' The bottom right of the slide features two large, overlapping yellow curved lines.

TASK OBJECTIVE

Task 3

Goals

Iteratively Transform Content Using AI

- Use ChatGPT to create an initial draft and make iterative refinements.
- Practice refining drafts using different prompt techniques and feedback loops.
- Analyze how each iteration impacts content quality and alignment with goals.

Original 2024 Coursera lesson slide. ASU workflow was proposed; Oppia example is a design review.

Follow one task across the service

Nava's caseworker toolkit pairs cited answers with staff review. For a future project, I would begin by understanding that task and its constraints.

Map the task, decisions and handoffs with the team.

Find where a rule or system state becomes confusing.

Prototype a manageable change and check comprehension.

Document the behavior, review implementation and learn from use.

Proposed approach for future opportunities; not a Nava project or prior government-contract work.
