Juniper Square - AI Enablement Lead

Mesa, Arizona | JonathanKyleHobson@gmail.com

September 8, 2026

Dear Juniper Square team,

I'm applying for Juniper Square's [AI Enablement Lead role](#). The work that interests me is helping someone turn an occasional AI experiment into a workflow they can use and judge for themselves. Your plan for practical workshops, office hours and role-specific learning connects with my work in AI teaching, instructional design and research.

For my published Coursera Guided Project, I built a beginner learning sequence around drafting, reviewing and refining content. I created the objectives, scripts, demonstrations and practice activities. When course review found weak distractors, answer-revealing feedback and incorrect task references, I revised them and documented my responses. That experience taught me to make the learning task specific and to change the material when feedback exposed a problem.

I also built and released Prompt Compass, a local-first tool that helps an AI assistant inspect requirements, compare prompt versions and choose an improvement route. One later local regression example deliberately gives a rewrite fewer instructions: it sounds cleaner but loses required fields and a review condition. That is the kind of concrete example I would use to teach why an AI result needs inspection before it enters someone's work.

At ASU, I developed digital learning materials and workshops and evaluated voice and chat flows. My current FactorLab work adds experience explaining interaction decisions and recovery behavior to product and engineering colleagues. I would bring that mix to Juniper Square's AI Guild, starting with a few real staff tasks and making any proposed adoption measures explicit. I'm based in Mesa, Arizona, have full U.S. work authorization and can start as soon as possible.

Thank you,
Kyle Hobson
