

Technical tools. Clear decisions.

Selected work in conversational interfaces,
prompt requirements and actionable feedback.

Product Designer application · September 2026

Make the first question easier to ask

Suggested questions offered a starting point while leaving the person free to edit or ask something else.

I worked within the existing product, keeping the answer layout and agreed phase scope in view.

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link". The form is set against a light blue background.

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with a red border around the "Password" field. A green feedback message "Incorrect Password" is displayed to the right of the password field. The form is set against a light blue background.

Proposed feedback beside the field

Give color a defined job

Brand, backgrounds, text and feedback
needed consistent roles across the
interface.

I documented those roles for the next design
iteration. This focused guide did not establish
a complete component library.

A useful prompt preserves the job

I built Prompt Compass to turn rough requests into inspectable workflows, with clear requirements and comparison points.

Cleaner language can lose the task

ORIGINAL FIXTURE PROMPT

Return valid JSON only with fields category, article_id, confidence, and suggested_response. If confidence is below 0.7, set suggested_response to needs_review. Success: parser accepts the response.

SHORTER REWRITE

Return a clean structured answer with the best response for the user.

Expected winner: the original

The rewrite loses named fields, JSON-only output and the low-confidence fallback.

Structured checks support the conversation

The host AI handles the dialogue and final language. My tool makes task requirements and tradeoffs available for review.

Q: ****Stage 1 — Who is this feature spec for?****

This prompt is asking for a Prompt Compass MCP upgrade. Who needs to read and act on the output?

A: Codex — the developer who will implement the upgrade

Original public example session · proposed feature specification

Next test: compare realistic prompt revisions against an agreed task rubric and human review.

A review flow for a technical user

Understand the decision

Observe how a user investigates a flagged interaction. Identify what they need before choosing a next action.

Prototype the alternatives

Use the existing Figma system to compare the flow, hierarchy and feedback with engineering.

Map the states

Work with product and research on available evidence, uncertain results and incomplete data.

Test the next action

Check whether users can explain the result and choose an appropriate action. Document what needs revision.

Let's make technical tools easier to use

Mesa, Arizona. Full U.S. work authorization. Available to start as soon as possible.
