

Make the next step clear. Keep the work moving.

Operational workflows, reusable patterns
and research-informed interface decisions.

Founding Product Designer application · September 2026

Make the first question easier to ask

Suggested questions offered a starting point while leaving the person free to edit or ask something else.

I worked within the existing product, keeping the answer layout and agreed phase scope in view.

Keep the request visible while it runs

The conversation needed to show that a request was still in progress, without making a new result appear before it existed.

I explored waiting feedback within the existing conversation and worked through animation constraints with the product lead.

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Organize content by the question it answers

**Summaries. Recommendations. Simple 7.
Comparisons. Accomplishments.**

I explored content density and reusable widget structures, then worked with engineers on what each action opened.

Original design detail · sample content

Let people inspect a recommendation

A short summary needs a route to the observations behind it and to a useful next action.

I explored that connection before expanding the range of widgets and content on the page.

Your safety focus this week

Repeated lift-plan checks showed up across your recent observations.

Your recent work suggests the crew is paying closer attention to lift planning, but **pinch-point hazards** still need a quick reminder.

🕒 Based on 5 observations and 2 conversations

[View why](#) [Use this in today's pre-task](#)

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". The "Password" field has a toggle icon on the right. Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link".

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with a red box highlighting the "Password" field. A green feedback message "Incorrect Password" is displayed to the right of the field.

Proposed feedback beside the field

Give color a defined job

Brand, backgrounds, text and feedback
needed consistent roles across the
interface.

I documented those roles for the next design
iteration. This focused guide did not establish
a complete component library.

Follow one operational task end to end

Learn the actual task

Observe an agency manager or advisor.
Understand the decision, supporting records
and handoffs involved.

Compare a small flow

Prototype one task with reusable patterns.
Explain alternatives and scope before
expanding the design.

Map the states and exceptions

Work with engineers on available data,
permissions and failure states. Keep domain
assumptions open for review.

Test and hand off the decision

Check whether people understand the state
and choose a useful next action. Document
behavior and remaining questions.

Let's make complex work easier to follow

Mesa, Arizona. Full U.S. work authorization. Available to start as soon as possible.
