Dear Livefront Design team,

The part of product design I value most is the conversation between a useful idea and the details a team can build. Your role brings that work together: understanding a client's needs, designing the flow, and staying involved as engineers work through the implementation. I would like to contribute that combination of research, interaction design, and clear handoff at Livefront.

At FactorLab, I design SmartTagIt web and mobile experiences. For its Flint assistant, I explored question entry and waiting states, then connected them to recovery actions. An interrupted answer and a lost connection need different next steps. I walked developers through those flows and revised recommendations as technical constraints became clearer. My portfolio shows the mobile design states and handoff artifacts; it identifies where the evidence stops short of a completed native release.

For About Me, I developed reusable insight widgets and compared their information order and density. At Oak AI, I connected usability findings to navigation and login-feedback recommendations and collaborated with the lead UX designer on mockups. Those projects have taught me to put a concrete alternative beside a finding, explain the tradeoff, and give the team something specific to challenge.

My KeepMake consulting work adds practice in defining a useful scope with stakeholders. I bring six years of Figma experience and a technical communication background to prototypes, design presentations, and implementation discussions. Livefront's emphasis on client relationships and design through engineering is a strong reason for me to apply; the selected work shows how I approach that responsibility.

I am based in Mesa, Arizona, authorized to work in the United States without sponsorship, and available to start as soon as possible. Occasional travel to your Minnesota headquarters works for me. I would welcome a conversation about the client products your design team is working on and how I could contribute.

Thank you,
Kyle Hobson
