

Clear flows. Useful handoffs.

Mobile interaction design, research,
and the details a team can build.

Selected work for Livefront
September 2026

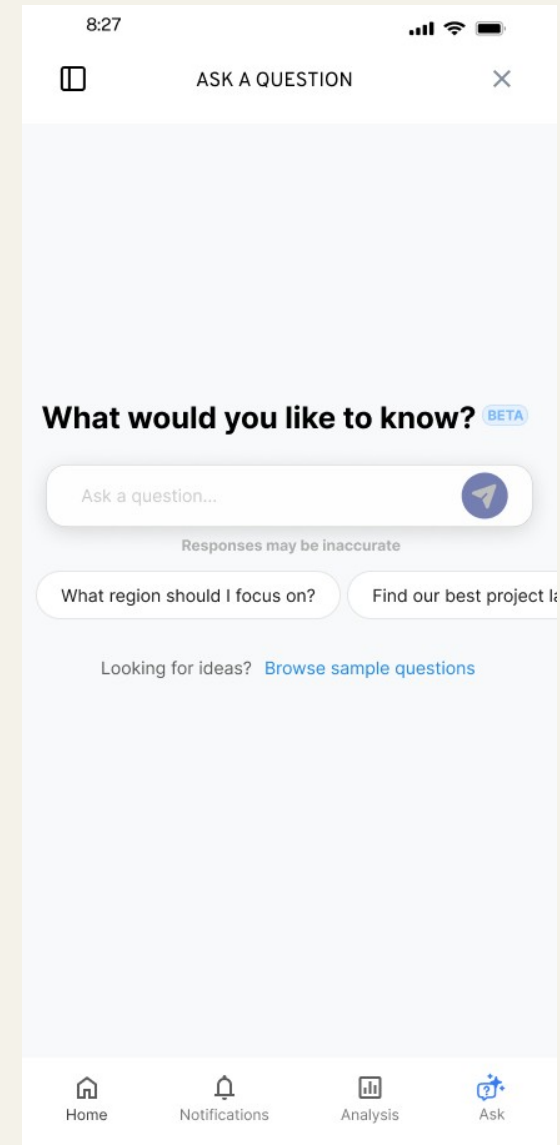

A useful first question

UX Designer & Researcher (Contract)
2025–2026

I explored suggested questions and a question library while keeping a person's own question close at hand.

Mobile design states and engineering handoff

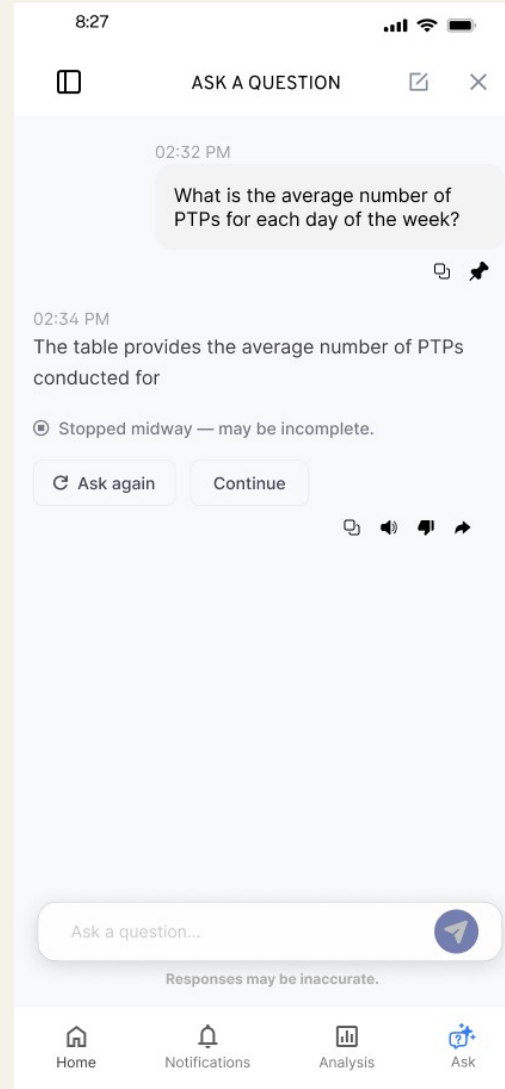

Recovery follows the failure

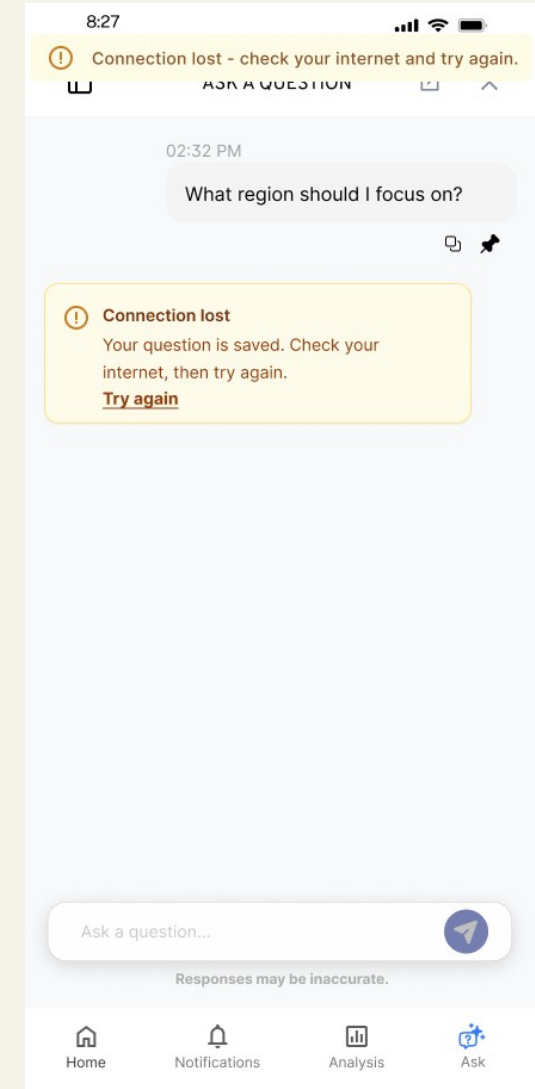

An incomplete answer and a lost connection need different next actions.

I connected the flows and their recovery actions in an annotated walkthrough for engineering.

Incomplete answer

Connection lost

Give each insight a clear job

I developed five widget groups, then explored their information order and content density.

Editable summary of the reviewed structure
Original screen iterations in the linked case

- 01 **Summaries**
- 02 **Recommendations**
- 03 **Simple 7**
- 04 **Comparisons**
- 05 **Accomplishments**

A comparison needs context

Mentioning fatigue less often is a comparison. Whether that is good depends on the context.

I raised the cohort and wording questions while developing reusable insight widgets.

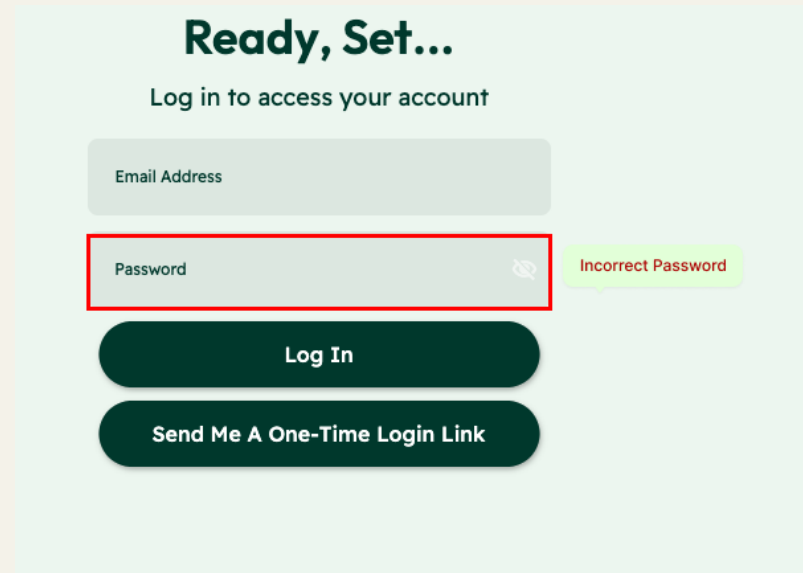

Original design iteration with sample values

Put a visible choice beside the finding

The original login error sat below the form. The recommendation connected the feedback to the password field.

I developed recommendations and collaborated with the lead UX designer. Fuller recovery guidance still needed work.

The mockup shows a login form on a light blue background. At the top, the text 'Ready, Set...' is in a bold, dark green font, followed by 'Log in to access your account' in a smaller, dark green font. Below this are two input fields: 'Email Address' and 'Password'. The 'Password' field is highlighted with a red rectangular border. To the right of the 'Password' field, a green speech bubble contains the text 'Incorrect Password'. Below the input fields are two dark green buttons with white text: 'Log In' and 'Send Me A One-Time Login Link'.

Proposed interface · implementation unverified

Make the handoff a design conversation

My walkthroughs put the state, the next action, and the unresolved choice where a team can review them.

- 01 Connect the normal path to waiting and recovery**
- 02 Explain the alternative and its tradeoff**
- 03 Revise with developers as constraints become clear**

Start with one complete client task

I would align with the client and team on the task, the constraints, and what the next design decision needs to resolve.

01 Understand the user's goal and delivery constraints

02 Prototype the path, including waiting and recovery

03 Review with users and engineering, then refine

Proposed collaboration approach; no prior Livefront client work is claimed.

Kyle Hobson

Mobile flows, research-informed design,
and clear engineering handoffs.
