

Research for the next decision.

User evidence, product alternatives,
and applied AI evaluation.

Selected work for Apollo.io
September 2026

Interest leaves a question unanswered

What makes it difficult for an engaged audience to take the next step?

I led survey creation, launch, and analysis, combining quantitative questions with open responses.

1,459

completed submissions

March 14, 2025 report snapshot
Voluntary audience; survey still live

Different barriers need different support

Five reported percentages from the original findings report

The pattern suggested smaller starting actions and concrete support.

Follow a finding into a testable proposal

Reported obstacle

Requested support

My proposed next test

Unclear action steps

Templates and simpler
instructions

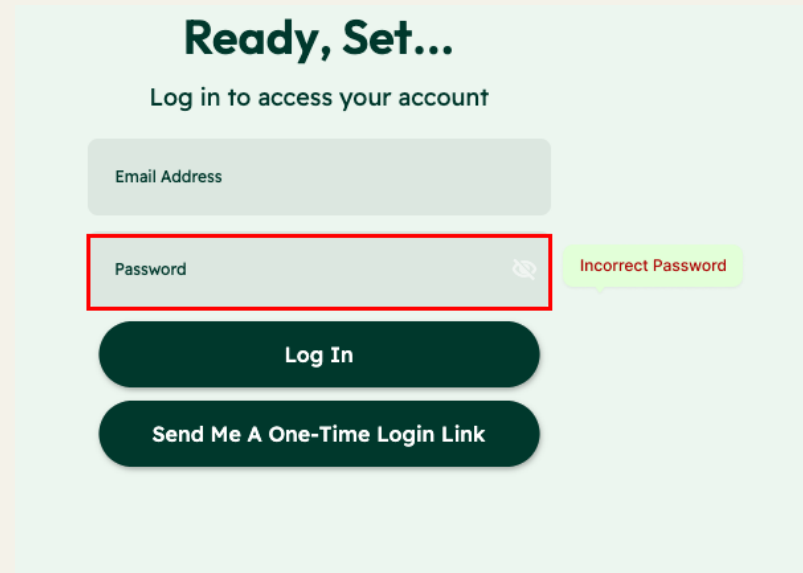

Can someone adapt a
template and complete
the first step?

The findings informed a proposed Action Hub. Adoption and business impact were not measured.

Name the risk. Show the alternative.

I connected navigation and feedback findings to visual recommendations, then presented them for backlog discussion.

An expert evaluation informed the proposal. I collaborated with the lead UX designer; implementation and measured improvement remain unverified.

The image shows a login interface on a light blue background. At the top, the text 'Ready, Set...' is in a bold, dark green font. Below it, 'Log in to access your account' is in a smaller, dark green font. There are two input fields: 'Email Address' and 'Password'. The 'Password' field is highlighted with a red rectangular border. To the right of the 'Password' field, there is a green speech bubble containing the text 'Incorrect Password' in red. Below the input fields are two dark green buttons with white text: 'Log In' and 'Send Me A One-Time Login Link'.

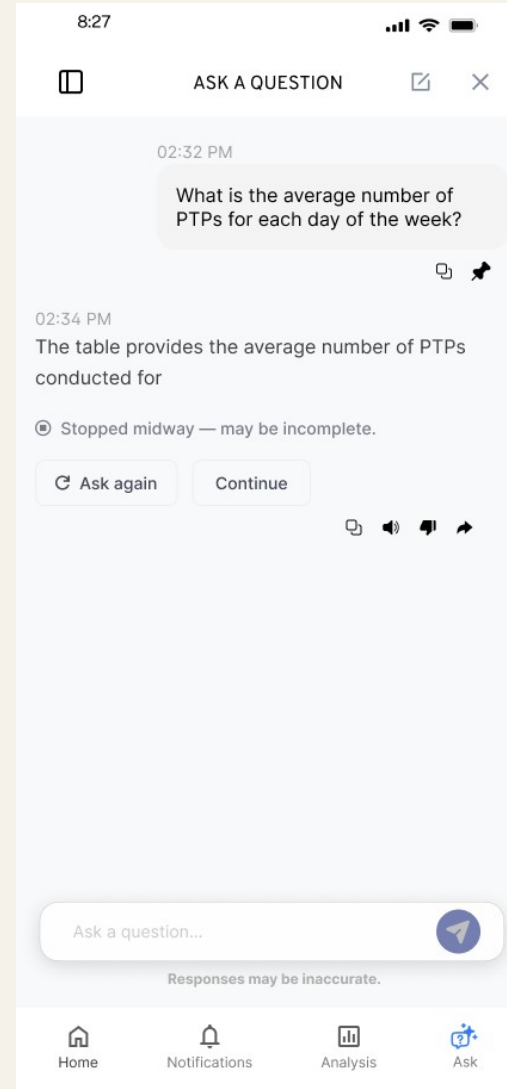

Original proposed login-feedback treatment

Carry the decision into the flow

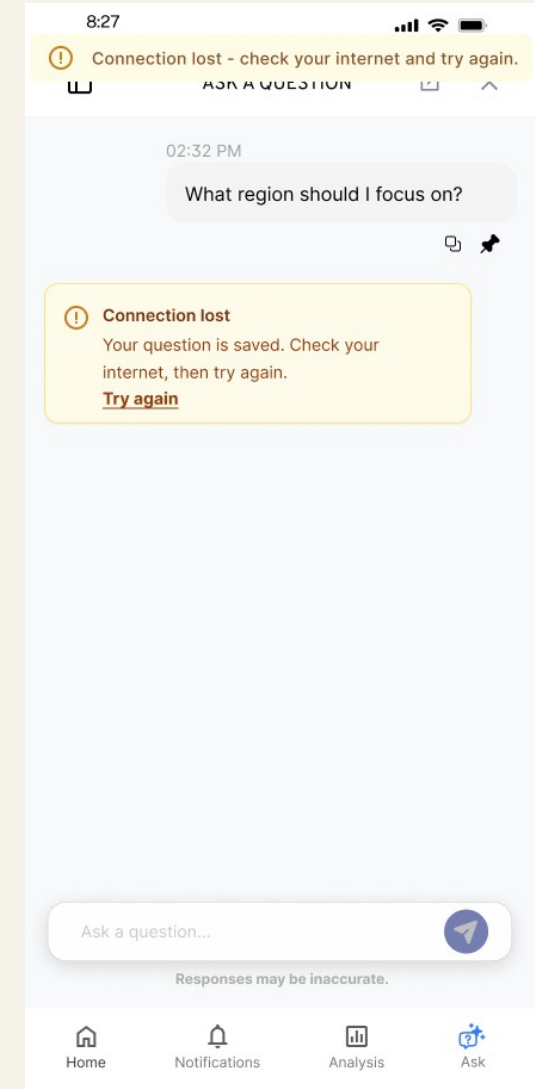

An interrupted AI answer and a lost connection need different next actions.

I designed connected states and used annotated walkthroughs to resolve the behavior with engineering.

Incomplete answer

Connection lost

A prompt rewrite can lose requirements

Original request

Valid JSON, four named fields, and a low-confidence review rule.

Shorter rewrite

A clean structured answer with the best response for the user.

My tool compares requirements as well as wording. This developer-authored test exposes what the shorter request leaves out.

Start with the decision a team needs

I would choose the method around the uncertainty: what people need, where a workflow fails, or whether an alternative helps.

01 Frame the decision and review the existing evidence

02 Study the task and prototype a focused alternative

03 Report the finding, its limits, and the next check

Kyle Hobson

Survey research, usability decisions,
and applied AI evaluation.
