

Product feedback and recovery flows

Interface states at FactorLab
and recommendations for Oak AI.

Trust Designer application · September 2026

Editable starting questions

Suggested questions offered a starting point while leaving the person free to edit or ask something else.

I worked within the existing product, keeping the answer layout and agreed phase scope in view.

A request in progress

The conversation needed to show that a request was still in progress, without making a new result appear before it existed.

I explored waiting feedback within the existing conversation and worked through animation constraints with the product lead.

Different failures need different actions

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Feedback organized by purpose

**Summaries. Recommendations. Simple 7.
Comparisons. Accomplishments.**

I explored content density and reusable widget structures, then worked with engineers on what each action opened.

Original design detail · sample content

The detail behind a recommendation

A short summary needs a route to the observations behind it and to a useful next action.

I explored that connection before expanding the range of widgets and content on the page.

Your safety focus this week

Repeated lift-plan checks showed up across your recent observations.

Your recent work suggests the crew is paying closer attention to lift planning, but **pinch-point hazards** still need a quick reminder.

🕒 Based on 5 observations and 2 conversations

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". The "Password" field has a toggle icon on its right. Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link".

Ready, Set...

Send Me A One-Time Login Link

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original but includes an error feedback message. The "Password" field is highlighted with a red border, and a green bubble with the text "Incorrect Password" is positioned to its right.

Proposed feedback beside the field

Consistent color roles

Brand, backgrounds, text and feedback needed consistent roles across the interface.

I documented those roles for the next design iteration. This focused guide did not establish a complete component library.

A trust flow to investigate

The customer's understanding

Observe a blocked account task.
Ask what the customer thinks happened
and what they expect to do next.

A bounded design comparison

Prototype the explanation and next action.
Compare web and mobile behavior while
retaining platform conventions.

The system's actual state

Map the state with engineers and Trust.
Clarify what can be disclosed, what remains
available and where support can help.

Comprehension before expansion

Test what people believe is protected,
what is pending and what they can do.
Document states and unresolved questions.

Clear feedback through difficult moments

Mesa, Arizona. Full U.S. work authorization. Available to start as soon as possible.
