

Clear interactions. Considered visual decisions.

Mobile and web design, visual communication
and creative instruction.

UX Designer, Digital Design · September 2026

Make the first question easier to ask

Suggested questions offered a starting point while leaving the person free to edit or ask something else.

I worked within the existing product, keeping the answer layout and agreed phase scope in view.

Keep the request visible while it runs

The conversation needed to show that a request was still in progress, without making a new result appear before it existed.

I explored waiting feedback within the existing conversation and worked through animation constraints with the product lead.

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Make revision something the learner can see

I created a beginner project around drafting, reviewing and refining content against a goal.

Published teaching activity. Learner improvement is not measured here.

Task 3

Goals

Iteratively Transform Content Using AI

- Use ChatGPT to create an initial draft and make iterative refinements.
- Practice refining drafts using different prompt techniques and feedback loops.
- Analyze how each iteration impacts content quality and alignment with goals.

Original 2024 lesson material · goals excerpt

Turn a broad request into a specific revision

A familiar café example gave beginners a draft to inspect and an instruction to change.

The revised answer added detail. In my retrospective, I would make factual checks and length limits more explicit.

Can you make this more engaging and inviting? Include sensory details and a friendly tone. Enhance it with substantance and a call to actions that includes essence what brings a coffee Enthusiasts their love for coffee.

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link". The form is set against a light blue background.

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with an error message "Incorrect Password" displayed next to the password field. The password field is highlighted with a red border, and the error message is in a yellow box.

Proposed feedback beside the field

Give color a defined job

Brand, backgrounds, text and feedback
needed consistent roles across the
interface.

I documented those roles for the next design
iteration. This focused guide did not establish
a complete component library.

A shared brief for the next design task

Understand the audience

Clarify who the work is for and what they should do next. Review the channel, brand guidance and delivery constraints.

Use feedback to revise

Compare stakeholder feedback with the brief. Resolve unclear choices and keep the next iteration focused on the task.

Make the direction visible

Sketch a flow or draft a visual direction. Use a concrete example to discuss hierarchy, content and tone with the team.

Prepare a clear handoff

Check states, copy and layout at the intended sizes. Document decisions and remaining questions before delivery.

Let's talk about the next design task

Mesa, Arizona. Full U.S. work authorization. Available to start as soon as possible.
