Virtualitics Sr Product Designer Application

Mesa, Arizona | JonathanKyleHobson@gmail.com

September 11, 2026

Dear Virtualitics team,

Virtualitics is designing agent-driven products where people need to understand a response, decide what to do next and recover when the system cannot complete the task. I am applying for Sr Product Designer because my work connects those interaction details with research, clear visual systems and engineering handoff.

At FactorLab, I design SmartTagIt workflows with the product lead and developers. For Flint, I worked through editable starting questions, waiting feedback and separate recovery actions for an incomplete answer and a lost connection. I connected the states in Figma, discussed behavior and constraints with engineering and organized the result for handoff.

At Oak AI, my research led to navigation alternatives, field-level login feedback and clearer color roles. I worked with the lead designer on visual recommendations and kept the questions that still needed validation visible. The work shows how I move from an observed interface problem to a concrete design decision without presenting a recommendation as a measured product outcome.

I also independently built and released Prompt Compass, a local tool for examining prompt requirements and comparing versions. Later local regression examples made it easier to see when a cleaner rewrite dropped a required field or review condition. At Virtualitics, I would bring that same care to agent responses, follow-on actions and error states while working with product managers and engineers on a focused prototype. I am based in Mesa, Arizona, have full U.S. work authorization and can start as soon as possible.

Thank you,
Kyle Hobson
