September 8, 2026

Dear Blackbaud hiring team,

I'm applying for Blackbaud's AI Adoption Specialist role, R0014520. Helping people incorporate AI into a real task takes clear guidance, a useful practice opportunity and a way to check what changed. That connects directly to my work across ASU instructional design and AI analysis, Coursera teaching and product UX research.

At ASU Knowledge Enterprise, I developed digital learning materials and workshops with accessibility improvements and AI-supported content workflows. My published Coursera project teaches beginners to write a prompt, inspect its result, revise the instruction and compare the next draft. I produced original demonstrations and revised quiz content through the review process. Its 4,700+ enrollments as of September 2026 show reach; I would assess workplace adoption through task performance and repeated use in the actual work context.

My UX and independent AI work add a practical review discipline. For FactorLab's Flint assistant, I distinguished an interrupted answer from a lost connection and documented the different recovery actions for engineering. In Prompt Compass, a designed regression case checks whether a shorter prompt still preserves required fields and human review conditions. Both examples start with what the person needs to understand and what the system must preserve.

Blackbaud's emphasis on human oversight in responsible AI is a reason I'm interested in this role. For an initial adoption effort, I would learn one team's task and readiness barriers, agree on a worked example and job aid, and test the guidance with representative employees. I would define the baseline and success measures with the product owner, then use observed difficulties and repeat-task evidence to guide revisions. This is the approach I would bring to the team. I'm based in Mesa, authorized to work in the U.S. without sponsorship and available to start as soon as possible.

Thank you,
Kyle Hobson
