Horace Mann - Development Enablement Specialist

Mesa, Arizona | JonathanKyleHobson@gmail.com

September 11, 2026

Dear Horace Mann team,

Horace Mann is building a training and support framework for people whose software-development experience varies widely. That is the part of the [Development Enablement Specialist role](#) that interests me: making the next action clear while helping a builder understand when a decision needs expert review. My background combines instructional design, applied AI work and product research.

At Arizona State University, I developed digital learning materials and workshops from April 2022 to October 2024. In an overlapping AI Analyst role, I designed and evaluated voice and chat flows and proposed a learner-task workflow with mentor review before generated tasks reached the learner. Those review points matter when guidance needs to be both useful and accountable.

I created and taught ChatGPT 4o for Beginners: Create Social Media Content, a published Coursera Guided Project. I wrote and recorded demonstrations, then revised assessment choices, task references and retry feedback in response to review. I also built and released Prompt Compass, a local prompt-analysis tool with structured checks and version comparison. A later local regression example shows how a shorter rewrite can lose required fields and a review fallback. The tool's documentation distinguishes those checks from broader claims about model quality.

At FactorLab, I design Figma workflows and document interaction states and recovery actions for engineers. I would bring that habit of making behavior explicit to developer guidance and support triage. My hands-on software work is in independent local tools and their release documentation; I would need to learn Horace Mann's Azure DevOps practices, access controls and compliance processes with the teams that own them.

I'm based in Mesa, Arizona, have full U.S. work authorization and am available to start as soon as possible. I would welcome a conversation about the first builder tier, the questions developers are already asking, and which training artifact would make the most useful starting point.

Thank you,
Kyle Hobson
