

Explain the tool. Keep the task intact.

Original teaching, local prompt evaluation
and workflows documented for engineering.

Development Enablement Specialist application · September 2026

Make revision something the learner can see

I created a beginner project around drafting, reviewing and refining content against a goal.

Published teaching activity. Learner improvement is not measured here.

Task 3

Goals

Iteratively Transform Content Using AI

- Use ChatGPT to create an initial draft and make iterative refinements.
- Practice refining drafts using different prompt techniques and feedback loops.
- Analyze how each iteration impacts content quality and alignment with goals.

Original 2024 lesson material · goals excerpt

Make the review change the material

Review finding	My documented revision
Choices were easy to eliminate	Reworked distractors, especially Questions 7, 8 and 10.
Question 7 tested only a definition	Added application of the concept alongside the definition.
Retry feedback revealed answers	Made feedback more neutral and referred learners to the lesson task.
Task references were incorrect	Corrected references across the assessment.

A cleaner rewrite can lose the task

ORIGINAL PROMPT

Return valid JSON only with fields category, article_id, confidence, and suggested_response. If confidence is below 0.7, set suggested_response to needs_review. Success: parser accepts the response.

The original explicitly keeps:

JSON-only output · four named fields
confidence below 0.7 → needs_review
parser acceptance as the success test

SHORTER REWRITE

Return a clean structured answer with the best response for the user.

The rewrite removes:

The named fields, the JSON-only requirement, the low-confidence fallback and the parser success test.

Original test inputs, excerpted from the portfolio rendering · expected winner: original prompt

Human review before learner-facing tasks

A staged prompt workflow for personalized learner tasks.

Simplified reconstruction · Documented proposal; no deployment or measured efficiency claimed.

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Give the tool a clear role

The local tool returns structured checks and routing.
The host assistant handles the conversation and final wording.

Connect the action to the decision

Start with one builder tier

Choose a common task with the owning team.
Identify the tools, access and review points
a builder needs before beginning.

Test the instructions in context

Review the guidance with technical owners.
Watch a builder try it and record questions
that belong in the guide or support queue.

Write a usable first guide

Show prerequisites and a worked example.
Pair the steps with a small practice task
and explicit criteria for checking the result.

Keep the guidance current

Learn the team's release and access practices.
Record owners, dependencies and review dates.
Use recurring support issues to guide updates.

Let's make technical work easier to learn

Mesa, Arizona. Available for remote work in the United States.
