September 8, 2026

Dear Horizontal Talent hiring team,

I'm applying for the Instructional Design contract in Tempe, job 75755. The combination of accessible learning assets, practical activities and human review of AI-assisted content matches the way I approach learning work. My background connects ASU instructional design, a published Coursera guided project and current software UX work.

At ASU Knowledge Enterprise, I developed digital learning materials and workshops with accessibility improvements and AI-supported content workflows. In my Coursera guided project, beginners work through a familiar content task: write an initial prompt, inspect the result, make the instruction more specific and compare the next draft. I created the teaching sequence and original demonstrations, and revised quiz content through the production review process. The project has more than 4,700 enrollments as of September 2026.

Careful review is also central to my independent Prompt Compass work. One designed example checks a rewrite that sounds simpler but drops required output fields and a review condition. The useful question is whether the revised instruction still preserves what the task requires. I would bring that attention to accuracy and conditions when using approved AI tools to draft or revise learning materials.

For an initial assignment, I would work with the subject matter expert on one task learners need to perform. I would connect a worked example with a practice activity and reference aid, then check accuracy, accessibility and consistency before release. Feedback would become a focused revision list with clear source ownership. I'm based in Mesa, available to start as soon as possible, and interested in the Tempe hybrid contract. I would welcome a discussion of the client's needs, approved tools and office schedule.

Thank you,
Kyle Hobson
