The next step is to make the request more specific and compare the result.

# Recovery guidance has to describe the real state

An interrupted answer and a lost connection needed different messages and actions. I organized those states in Figma and annotated the behavior for engineering.

For technical learning: distinguish the condition before explaining the recovery action.

# A rewrite must preserve the requirement

## ORIGINAL FIXTURE PROMPT

Return valid JSON only with fields category, article\_id, confidence, and suggested\_response. If confidence is below 0.7, set suggested\_response to needs\_review. Success: parser accepts the response.

## SHORTER REWRITE

Return a clean structured answer with the best response for the user.

## Expected winner: the original

The rewrite loses named fields, JSON-only output and the review condition.

# Mentor review in a proposed workflow

I proposed staged generation of personalized learner tasks, with a mentor checking the context and the output.

Simplified reconstruction of my 2024 proposal. Deployment and time savings were not established.

**REVIEW GATE 01**

**REVIEW GATE 02**

# A task learners can practice

For job 75755, I would start with one learning asset that the team can review, revise and maintain using approved sources and tools.

Define the task, its starting conditions and a useful practice outcome.

Connect an example, a practice activity and a reference aid.

Review accuracy and accessibility with the subject matter expert.

Track feedback, source ownership and the next revision.

Proposed approach for discussion with the recruiter and client learning team.
