

Make the next step clear. Help learning continue.

Mobile and web interactions, clear feedback
and purposeful learning activities.

Future design, research and contract work · September 2026

Make the first question easier to ask

Suggested questions offered a starting point while leaving the person free to edit or ask something else.

I worked within the existing product, keeping the answer layout and agreed phase scope in view.

Keep the request visible while it runs

The conversation needed to show that a request was still in progress, without making a new result appear before it existed.

I explored waiting feedback within the existing conversation and worked through animation constraints with the product lead.

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Make revision something the learner can see

I created a beginner project around drafting, reviewing and refining content against a goal.

Published teaching activity. Learner improvement is not measured here.

Task 3

Goals

Iteratively Transform Content Using AI

- Use ChatGPT to create an initial draft and make iterative refinements.
- Practice refining drafts using different prompt techniques and feedback loops.
- Analyze how each iteration impacts content quality and alignment with goals.

Original 2024 lesson material · goals excerpt

Turn a broad request into a specific revision

A familiar café example gave beginners a draft to inspect and an instruction to change.

The revised answer added detail. In my retrospective, I would make factual checks and length limits more explicit.

Can you make this more engaging and inviting? Include sensory details and a friendly tone. Enhance it with substantance and a call to actions that includes essence what brings a coffee Enthusiasts their love for coffee.

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link". The form is set against a light blue background.

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with a red border around the "Password" field. A green feedback message "Incorrect Password" is displayed to the right of the password field. The form is set against a light blue background.

Proposed feedback beside the field

Give color a defined job

Brand, backgrounds, text and feedback
needed consistent roles across the
interface.

I documented those roles for the next design
iteration. This focused guide did not establish
a complete component library.

Follow one learning task end to end

Learn the classroom task

Observe the teacher or learner. Identify what they need to understand and where the flow interrupts their work.

Work within real constraints

Compare a small flow with the team. Reuse components and discuss data, accessibility and engineering needs.

Connect feedback to a next step

Review instructions and interaction states. Make progress, errors and recovery clear across mobile and web.

Check understanding before scope

Test whether people understand the next action. Read feedback and available analytics to inform the next priority.

Let's make learning tools easier to use

Mesa, Arizona. Full U.S. work authorization. Available to start as soon as possible.
