

Jonathan Kyle Hobson

UX Researcher | Freelance and Embedded Research at Blink

Mesa, Arizona | JonathanKyleHobson@gmail.com

September 8, 2026

Dear Blink research team,

I am interested in joining Blink's freelance and embedded research network because your work connects research to decisions a client needs to make. Your current focus on AI workflows is especially relevant to my experience in AI products and digital learning. I enjoy the point in a project when a broad concern becomes a study question that the team can act on.

At Oak AI, I led survey design, launch, and analysis for a creator-audience study with 1,459 completed submissions at the March 14, 2025 snapshot. I combined structured questions about barriers with open responses about useful support. The findings informed a proposed Action Hub direction, while the voluntary sample and self-reported preferences set clear limits on what we could conclude. The next question was whether people could choose and complete an action in a prototype.

In separate Oak work, I coded privacy-community observations in Dovetail and used the themes to question our audience assumptions. I also conducted a desktop heuristic evaluation and presented recommendations for navigation and error recovery. My portfolio distinguishes those methods: an expert review can identify an interface problem worth investigating, but it does not establish how often users encounter it.

Today, my contract work at FactorLab connects usability questions with Figma prototypes and engineering decisions. I also serve as UX Research Lead in my volunteer work with Oppia. Across these settings, I make assumptions visible and keep a record of why a recommendation changed. Blink's emphasis on clear responsibilities, autonomy, and feedback fits how I want to work with a client team.

I would welcome a conversation about an upcoming research engagement. I am based in Mesa, Arizona, authorized to work in the United States without sponsorship, and available to start as soon as possible. I am open to both freelance projects and embedded roles. The separate portfolio and presentation linked below show my contribution, source evidence, and the next question each study raised.

Thank you,
Kyle Hobson
