

Research for the next client decision

I study where people get stuck so teams can
make better product decisions.

Freelance and embedded research · September 2026

What keeps interest from becoming action?

I led survey design, launch and analysis.

I combined structured questions about barriers with open responses about what would help.

A voluntary audience sample surfaced reported needs. It could not establish future use or purchase.

Reported barriers to taking action

Original findings report · March 2025

Reported percentages · per-item response base unavailable · voluntary audience sample

A proposed Action Hub direction

The findings pointed toward smaller, clearer actions and support for following through.

REPORTED NEED

Overwhelm and unclear steps

Limited time and resources

Doubt about whether action matters

PROPOSED DIRECTION

A focused action with instructions

Reusable templates and task support

Visible progress and feedback

Next validation: test whether people can choose and complete an action in a prototype.

Testing an audience assumption

I studied existing community discussions, then coded excerpts to examine whether Oak’s audience assumptions fit.

Tag	Tag group	Note type	Observed	Created
Data Security	Topic Tags	Raw Data	Sep 27, 2024	Sep 29, 2024
Corporate Accountability	Topic Tags	Synthesis	Sep 28, 2024	Sep 30, 2024
Personal Data & Online Safety	Topic Tags	Raw Data	Sep 27, 2024	Sep 29, 2024

Audience fit needed another look

I used concerns about data protection, accountability and control to question audience fit and reconsider the next research investment.

Portfolio synthesis based on source tags

01

Data security

**How is data
protected?**

02

Accountability

**Who is
accountable?**

03

Personal control

**What can a
person control?**

A partial coding export supports exploration. A purposive sample cannot establish market-wide demand.

Where would someone get stuck?

I evaluated the desktop experience and documented findings for the product team.

Expert review exposed navigation and recovery problems to investigate next.

-  Oak Achievements (coming soon!)
-  User Account
-  Log Out

Recovery feedback needed a clearer location

The existing error appeared at the page footer, away from the login fields.

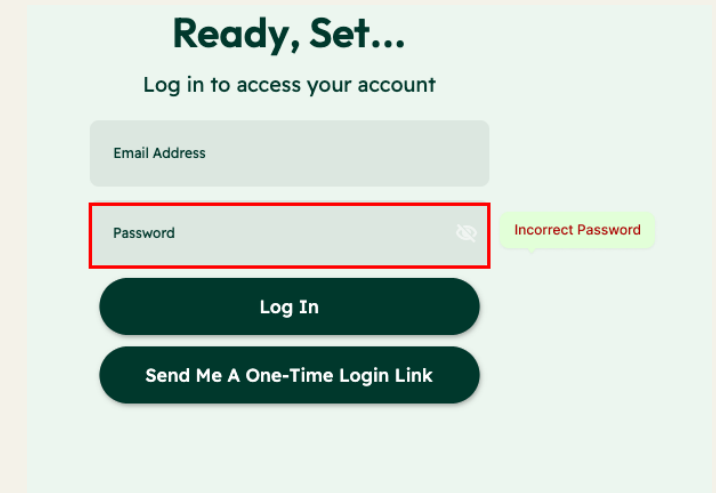

I recommended placing the correction beside the field where someone could act.

Original

The original login form is titled "Ready, Set..." and "Log in to access your account". It features two input fields: "Email Address" and "Password". Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link". The form is set against a light blue background.

Proposed

The proposed login form is identical to the original, but with a red border around the "Password" field and a green message "Incorrect Password" displayed to the right of the field. The rest of the form, including the "Email Address" field, buttons, and background, remains the same.

Original page-footer error

Error: Invalid login credentials

Findings ready for backlog planning

I presented the evaluation and recommendations, then helped turn the findings into a UX improvement list.

22 NOV 2023

Desktop evaluation

Navigation, hierarchy and error recovery

27 NOV 2023

Specific interface changes and rationale

03 DEC 2023

Presentation

Improvement list started for backlog planning

I collaborated on Figma mockups. Lead designer Megan led the later design refinements.

Begin with the decision the client needs

Agree on what the team needs to learn, then make the study and its limits easy to review.

Frame the question

Align on the decision, audience, and evidence already available.

Choose the study

Match the method to the question and review the plan with the team.

Support the next step

Show what the findings support, what remains uncertain, and what to test.

Kyle Hobson

Research that helps a client decide.
Clear evidence and a useful next question.
