Feedback with context

UX Designer & Researcher (Contract), 2026

I connected a personal summary to its supporting observations and a useful next action.

Design iterations shown with sample content.
Web/server release confirmed September 2, 2026.

Your safety focus this week

Repeated lift-plan checks showed up across your recent observations.

Your recent work suggests the crew is paying closer attention to lift planning, but **pinch-point hazards** still need a quick reminder.

✓ Based on 5 observations and 2 conversations

View why

Use this in today's pre-task

A comparison needs an interpretation

Mentioning fatigue less often is a comparison. Whether that is good depends on the context.

I raised the cohort, percentile and wording questions before they became interface rules.

Original widget, illustrative values

Competing entry points

Training an assistant, starting a Vibecheck and requesting support competed at the same entry point.

I used the audit to make these choices explicit for the team's review.

Usability evaluation and design recommendations

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". The "Password" field has a toggle icon on the right. Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link".

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with a red border around the "Password" field. A green feedback message "Incorrect Password" is displayed to the right of the field. The buttons "Log In" and "Send Me A One-Time Login Link" remain below the fields.

Proposed feedback beside the field

From a question to a public beta

Can a prompt rewrite sound clearer while
losing the task's requirements?

I built and released a local tool that structures
the requirements, identifies gaps, and helps an
assistant compare prompt versions.

RECONSTRUCTED FROM IMPLEMENTATION

Route the work before rewriting it.

Prompt Compass · structured analysis for a host AI to use

Reconstructed from the current local implementation · server.py and service.py
A selected workflow, not a claim that every current function was in the first beta release.

Reconstruction of implemented workflow

A rewrite must preserve the requirement

ORIGINAL FIXTURE PROMPT

Return valid JSON only with fields category, article_id, confidence, and suggested_response. If confidence is below 0.7, set suggested_response to needs_review. Success: parser accepts the response.

SHORTER REWRITE

Return a clean structured answer with the best response for the user.

Expected winner: the original

A designed regression case: the rewrite loses named fields and the review condition.

What would make an insight useful?

I would begin with the decision an educator needs to make, then trace the information needed to support it.

What does the person understand from the summary?

Can they inspect the evidence and its limits?

Which next action fits their role and context?

Can they explain why that action is appropriate?

Research into product decisions.
