

Operational data. Useful next actions.

AI insights, task continuity,
and the evidence behind an interaction.

Feedback with context

UX Designer & Researcher (Contract), 2026

I connected a personal summary to its supporting observations and a useful next action.

Design iterations shown with sample content.
Web/server release confirmed September 2, 2026.

Your safety focus this week

Repeated lift-plan checks showed up across your recent observations.

Your recent work suggests the crew is paying closer attention to lift planning, but **pinch-point hazards** still need a quick reminder.

✓ Based on 5 observations and 2 conversations

[Use this in today's pre-task](#)

A comparison needs an interpretation

Mentioning fatigue less often is a comparison. Whether that is good depends on the context.

I raised the cohort, percentile and wording questions before they became interface rules.

Original widget, illustrative values

A useful first question

UX Designer & Researcher (Contract)
2025–2026

I explored suggested questions and a question library while keeping a person's own question close at hand.

Design deliverables and engineering handoff

Mobile and desktop conversation flows

Waiting is part of the conversation

I kept the question visible and gave the response a distinct waiting state.

Animation was an implementation question to resolve with engineering.

Original state detail

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Make the task explicit.

I built and released a tool that helps an AI assistant inspect requirements and compare prompt versions.

Public beta released April 2026.

The pictured local test asks whether a rewrite preserves required output behavior.

[Explore the public beta](#)

DESIGNED REGRESSION FIXTURE

Cleaner wording. A weaker contract.

Prompt Compass · comparing the job a prompt must preserve

ORIGINAL PROMPT

Return valid JSON only with fields category, article_id, confidence, and suggested_response. If confidence is below 0.7, set suggested_response to needs_review. Success: parser accepts the response.

The original explicitly keeps:

JSON-only output · four named fields
confidence below 0.7 → needs_review
parser acceptance as the success test

SHORTER REWRITE

Return a clean structured answer with the best response for the user.

The rewrite removes:

The named fields, the JSON-only requirement, the low-confidence fallback and the parser success test.

EXPECTED WINNER

The original prompt

Preserve the output contract before rewarding cleaner prose.

Designed local regression fixture · expected result, not a live customer incident
Exact prompts preserved from the original May 2026 test data.

Competing entry points

Training an assistant, starting a Vibecheck and requesting support competed at the same entry point.

I used the audit to make these choices explicit for the team's review.

Usability evaluation and design recommendations

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link". The form is set against a light blue background.

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with a red border around the "Password" field. A green feedback message "Incorrect Password" is displayed to the right of the password field. The form is set against a light blue background.

Proposed feedback beside the field

Observe the work. Prototype the next step.

Observe the task on site: what the operator needs to know, how interruptions happen, and what confirms the action.

Proposed approach: test a focused prototype with users and engineering, including unclear inventory data and interrupted tasks.

Let's make operational data useful

Available for Gather AI's UX Designer role. Based in Mesa, Arizona; ready to start as soon as possible.
