

Clear decisions Usable interfaces

Selected work in information hierarchy,
interface patterns, and usable flows.

Feedback with context

UX Designer & Researcher (Contract), 2026

I connected a personal summary to its supporting observations and a useful next action.

Design iterations shown with sample content.
Web/server release confirmed September 2, 2026.

Your safety focus this week

Repeated lift-plan checks
showed up across your recent
observations.

Your recent work suggests the crew is
paying closer attention to lift planning, but
pinch-point hazards still need a quick
reminder.

✓ Based on 5 observations and 2 conversations

View why

Use this in today's pre-task

A comparison needs an interpretation

Mentioning fatigue less often is a comparison. Whether that is good depends on the context.

I raised the cohort, percentile and wording questions before they became interface rules.

Original widget, illustrative values

Competing entry points

Training an assistant, starting a Vibecheck and requesting support competed at the same entry point.

I used the audit to make these choices explicit for the team's review.

Usability evaluation and design recommendations

-  Oak Achievements (coming soon!)
-  User Account
-  Log Out

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". The "Password" field has a toggle icon on the right. Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link".

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with a red border around the "Password" field. A green feedback message "Incorrect Password" is displayed to the right of the field. The buttons "Log In" and "Send Me A One-Time Login Link" remain below the fields.

Proposed feedback beside the field

A useful first question

UX Designer & Researcher (Contract)
2025–2026

I explored suggested questions and a question library while keeping a person's own question close at hand.

Design deliverables and engineering handoff

Mobile and desktop conversation flows

Waiting is part of the conversation

I kept the question visible and gave the response a distinct waiting state.

Animation was an implementation question to resolve with engineering.

Original state detail

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

A focused consumer-flow iteration

Choose a point where a person needs to understand an offer, enter information, or recover from an error.

Inspect the current flow

Use existing research and behavior data to define the question.

Try a focused change

Prototype within the component library and review with the pod.

Learn from the next attempt

Use testing and experiment results to guide the next revision.

Kyle Hobson

Product design informed by research.
Clear artifacts for a team to build and review.
