Product Designer II, Notifications • Application to Pinterest

Mesa, Arizona | JonathanKyleHobson@gmail.com

September 8, 2026

Dear Pinterest team,

A notification asks someone to interrupt what they are doing. I would want its message, destination, and controls to justify that interruption. That is what draws me to Pinterest's Product Designer II, Notifications role: the chance to make a small interaction feel useful and give people a clear choice about what happens next.

At FactorLab, I design web and mobile interactions for SmartTagIt. For the Flint AI assistant, I explored suggested and saved questions, waiting states, and recovery. An incomplete answer and a lost connection needed different actions, with the person's question preserved. I brought those flows together in an annotated engineering handoff and worked through implementation questions with developers.

In SmartTagIt's About Me experience, I connected personal summaries to supporting observations and next actions, while making comparison and wording questions explicit. At Oak AI, I connected evaluation and user research to navigation and error-feedback refinements. Those projects show how I turn an ambiguous experience into specific choices the team can review, prototype, and test.

I also build AI tools. Prompt Compass began as a public beta that helps an assistant inspect requirements and compare prompt versions; later local evaluation examples check for behavior lost in a rewrite. That practice keeps the review criteria visible as the tools change. I would bring the same care to using AI in exploration while checking whether the resulting interaction is understandable and preserves user control.

I am based in Mesa, Arizona, can start as soon as possible, and am authorized to work in the United States without sponsorship. I am open to the periodic in-person collaboration described in the role. My tailored portfolio includes the original design evidence, the work stage, and the reasoning behind each recommendation.

Thank you,
Kyle Hobson
