

A clear choice. A useful next step.

Interaction states, user control,
and research that sharpens the next design.

Selected work for Pinterest · September 2026

A useful first question

UX Designer & Researcher (Contract)
2025–2026

I explored suggested questions and a question library while keeping a person's own question close at hand.

Design deliverables and engineering handoff

Mobile and desktop conversation flows

Waiting is part of the conversation

I kept the question visible and gave the response a distinct waiting state.

Animation was an implementation question to resolve with engineering.

Original state detail

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

Feedback with context

UX Designer & Researcher (Contract), 2026

I connected a personal summary to its supporting observations and a useful next action.

Design iterations shown with sample content.
Web/server release confirmed September 2, 2026.

Your safety focus this week

Repeated lift-plan checks showed up across your recent observations.

Your recent work suggests the crew is paying closer attention to lift planning, but **pinch-point hazards** still need a quick reminder.

✓ Based on 5 observations and 2 conversations

View why

Use this in today's pre-task

A comparison needs an interpretation

Mentioning fatigue less often is a comparison. Whether that is good depends on the context.

I raised the cohort, percentile and wording questions before they became interface rules.

Original widget, illustrative values

Make the task explicit.

I built and released a tool that helps an AI assistant inspect requirements and compare prompt versions.

Public beta released April 2026.

The pictured local test asks whether a rewrite preserves required output behavior.

[Explore the public beta](#)

DESIGNED REGRESSION FIXTURE

Cleaner wording. A weaker contract.

Prompt Compass · comparing the job a prompt must preserve

ORIGINAL PROMPT

Return valid JSON only with fields category, article_id, confidence, and suggested_response. If confidence is below 0.7, set suggested_response to needs_review. Success: parser accepts the response.

The original explicitly keeps:

JSON-only output · four named fields
confidence below 0.7 → needs_review
parser acceptance as the success test

SHORTER REWRITE

Return a clean structured answer with the best response for the user.

The rewrite removes:

The named fields, the JSON-only requirement, the low-confidence fallback and the parser success test.

EXPECTED WINNER

The original prompt

Preserve the output contract before rewarding cleaner prose.

Designed local regression fixture · expected result, not a live customer incident
Exact prompts preserved from the original May 2026 test data.

Competing entry points

Training an assistant, starting a Vibecheck and requesting support competed at the same entry point.

I used the audit to make these choices explicit for the team's review.

Usability evaluation and design recommendations

Error feedback beside the field

I made the problem field visible where a person could act on it.

The recommendation gave the team a specific behavior to discuss and prioritize.

Original

The original login form is titled "Ready, Set..." with the subtitle "Log in to access your account". It features two input fields: "Email Address" and "Password". Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link". The form is set against a light blue background.

Original error at the page footer

Error: Invalid login credentials

Proposed

The proposed login form is identical to the original, but with a red border around the "Password" field. A green feedback message "Incorrect Password" is displayed to the right of the password field. The form is set against a light blue background.

Proposed feedback beside the field

Make the interruption worth it.

Start with the reason to return. Trace the message, destination and preference controls as one journey.

Proposed test: check whether people understand why they received a message, what it opens, and how to change the preference.

Let's make the next interaction useful

Available for Pinterest's Product Designer II, Notifications role. Based in Mesa, Arizona; ready to start as soon as possible.
