Product Designer II, Design Systems | Coinbase

Mesa, Arizona | JonathanKyleHobson@gmail.com

September 8, 2026

Dear Coinbase Design Systems team,

A reusable component carries a decision about what someone can understand and do. That is what interests me about your Design Systems role: the opportunity to make those decisions consistent across a product, then work with design and engineering to improve them as the product changes.

At FactorLab, I design SmartTagIt experiences and walk developers through the details. For About Me, I developed reusable insight widgets across summaries, recommendations, Simple 7, comparisons, and accomplishments. The work included information order and content density, but also questions about meaning: mentioning fatigue less often is a comparison, and whether that is positive depends on the context. For the Flint assistant, I connected entry and waiting states to recovery actions, treating connection loss differently from an interrupted answer.

I bring research into those design decisions. At Oak AI, I translated usability findings into navigation, contrast, and error-feedback recommendations and worked with engineering through design iterations. My technical communication background helps me explain a pattern, its intended behavior, and the unresolved question that still needs a team decision.

I also built and released Prompt Compass, a local tool for inspecting prompt requirements and comparing versions. Later developer-authored examples check whether a shorter rewrite preserves required fields and review rules. That work is relevant to your emphasis on responsible AI: a useful output needs to be checked against the task it was meant to support. My direct systems evidence comes from product-level patterns and engineering handoffs; the accompanying portfolio makes the artifacts and their release status available for review.

I would welcome a conversation about the patterns your team is improving and how this experience could contribute. I have six years of Figma experience, am based in Mesa, Arizona, and am available for U.S. remote work and the quarterly in-person working sessions described in the role. I am authorized to work without sponsorship and available to start as soon as possible.

Thank you,
Kyle Hobson
