

Patterns people can use consistently

Reusable interfaces, connected states, and the decisions behind them.

Five families, one starting point

I developed insight widgets around recurring information needs, then explored their order and content density.

Summary of the reviewed structure
Original screen iterations in the linked case

- 01 **Summaries**
- 02 **Recommendations**
- 03 **Simple 7**
- 04 **Comparisons**
- 05 **Accomplishments**

A comparison needs context

Mentioning fatigue less often is a comparison. Whether that is good depends on the context.

I raised the cohort and wording questions while developing reusable insight widgets.

Original design iteration with sample values

A useful first question

UX Designer & Researcher (Contract)
2025-2026

I explored suggested questions and a question library while keeping a person's own question close at hand.

Design deliverables and engineering handoff

Recovery follows the failure

An incomplete answer and a lost connection need different next actions.

I assembled the connected flows and their next actions into an annotated handoff for engineering.

Incomplete answer

Connection lost

A pattern needs a shared explanation

My walkthroughs make the state, the next action, and the unresolved choice available for review.

- 01 Connect the normal path to waiting and recovery**
- 02 Explain what should stay consistent across variants**
- 03 Revise with developers as constraints become clear**

A prompt rewrite can lose requirements

Original request

Valid JSON, four named fields, and a low-confidence review rule.

Shorter rewrite

A clean structured answer with the best response for the user.

My tool compares requirements as well as wording. This developer-authored test exposes what the shorter request leaves out.

A first contribution to CDS

I would begin with one recurring pattern and the product contexts that expose its limits.

01 Review existing usage and constraints with the team

02 Prototype the states inside real product screens

03 Test the behavior and document implementation choices

Proposed approach for this role; no prior Coinbase work is claimed.
