Arkestro — AI Enablement Lead Application

Mesa, Arizona | JonathanKyleHobson@gmail.com

September 8, 2026

Dear Arkestro team,

I'm applying for Arkestro's AI Enablement Lead role. Your emphasis on building with a department and helping others reuse the result connects with how I approach AI: understand the task, make a small workflow inspectable, and teach the decisions someone needs to make. My background combines AI analysis at ASU, independent tool development, product research and published teaching.

I built and released Prompt Compass, a local tool that helps an assistant inspect requirements, choose an improvement route and compare prompt versions. One later local regression example deliberately replaces an explicit JSON instruction with a shorter rewrite. The check exposes the missing fields; it does not pretend that cleaner wording preserves the original task. I also built an independent, read-only Research Compass edition that retrieves evidence with source references and makes gaps in a source bundle visible. These are concrete tools I can walk through, with clear boundaries around what has been released and what has only been evaluated locally.

At ASU Learning Innovations, I designed and evaluated voice and chat flows and proposed a learner-task workflow with mentor review before generated tasks reached learners. At Knowledge Enterprise, I developed digital learning materials and workshops. For Coursera, I created and taught a published beginner project that moves from a prompt to its output, a revision and a practical content calendar. That combination lets me work on both the workflow and the explanation a person needs to use it.

At Arkestro, I would start with one department's recurring task, an engaged subject matter expert and a clear baseline. We would agree on an acceptable result and human review points, build and test the workflow, and record correction effort, task time and tool cost. I would turn the useful parts into a short guide another champion could try, then check whether the result holds for that team. This is the approach I would bring; I'm not presenting my independent projects as evidence of company-wide adoption or realized financial savings.

I'm based in Mesa, Arizona, authorized to work in the United States without sponsorship, and available to start as soon as possible. I'm open to periodic travel. I would welcome a conversation about the first workflows you want this role to improve and how you will judge their value.

Thank you,
Kyle Hobson
