

Research for connected workflows

Mixed methods, product decisions,
and human judgment around AI.

Selected for Bask Health · September 2026

What keeps interest from becoming action?

I led survey design, launch and analysis.

I combined structured questions about barriers with open responses about what would help.

A voluntary audience sample surfaced reported needs. It could not establish future use or purchase.

DATED SOURCE SNAPSHOT

While the survey was still live.

March 14, 2025 · submission status in the original report

1,459

Completed submissions

1,741

Total submissions

282

Incomplete submissions

ORIGINAL REPORT EXCERPT

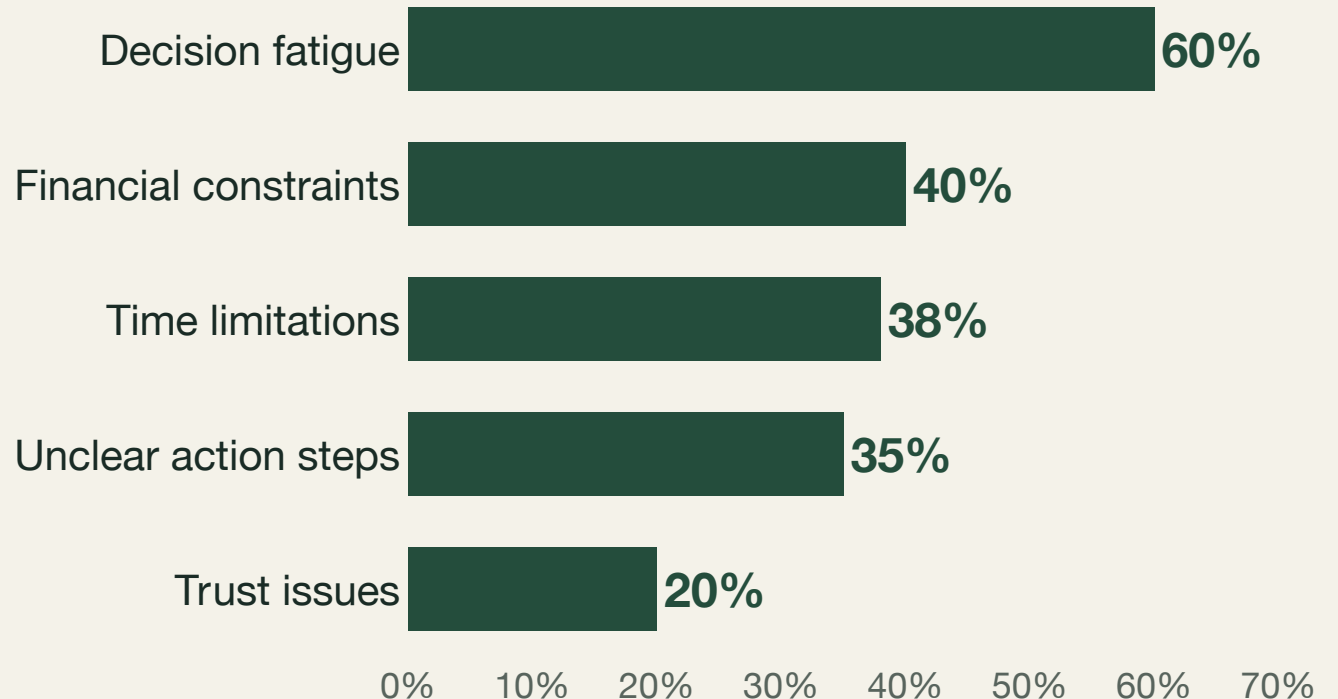

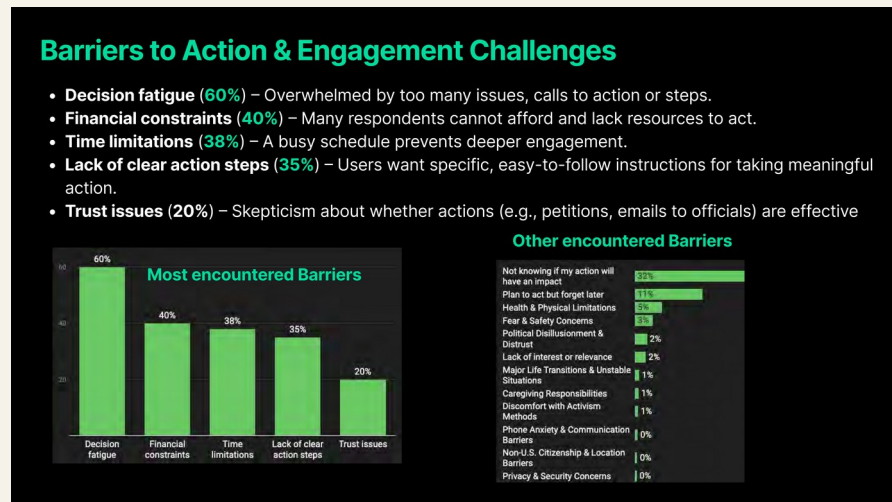

Overview

- Total of **1,459** completed finished submissions as of March 14th 2025.
- Total of **1,741** with 282 incomplete response. Note: Survey is still live.

Reported barriers to taking action

Original findings report · March 2025

Reported percentages · per-item response base unavailable · voluntary audience sample

A proposed Action Hub direction

The findings pointed toward smaller, clearer actions and support for following through.

REPORTED NEED

Overwhelm and unclear steps

Limited time and resources

Doubt about whether action matters

PROPOSED DIRECTION

A focused action with instructions

Reusable templates and task support

Visible progress and feedback

Next validation: test whether people can choose and complete an action in a prototype.

Testing an audience assumption

I studied existing community discussions, then coded excerpts to examine whether Oak’s audience assumptions fit.

Tag	Tag group	Note type	Observed	Created
Data Security	Topic Tags	Raw Data	Sep 27, 2024	Sep 29, 2024
Corporate Accountability	Topic Tags	Synthesis	Sep 28, 2024	Sep 30, 2024
Personal Data & Online Safety	Topic Tags	Raw Data	Sep 27, 2024	Sep 29, 2024

Audience fit needed another look

I used concerns about data protection, accountability and control to question audience fit and reconsider the next research investment.

Portfolio synthesis based on source tags

01

Data security

**How is data
protected?**

02

Accountability

**Who is
accountable?**

03

Personal control

**What can a
person control?**

A partial coding export supports exploration. A purposive sample cannot establish market-wide demand.

Where would someone get stuck?

I evaluated the desktop experience and documented findings for the product team.

Expert review exposed navigation and recovery problems to investigate next.

Recovery feedback needed a clearer location

The existing error appeared at the page footer, away from the login fields.

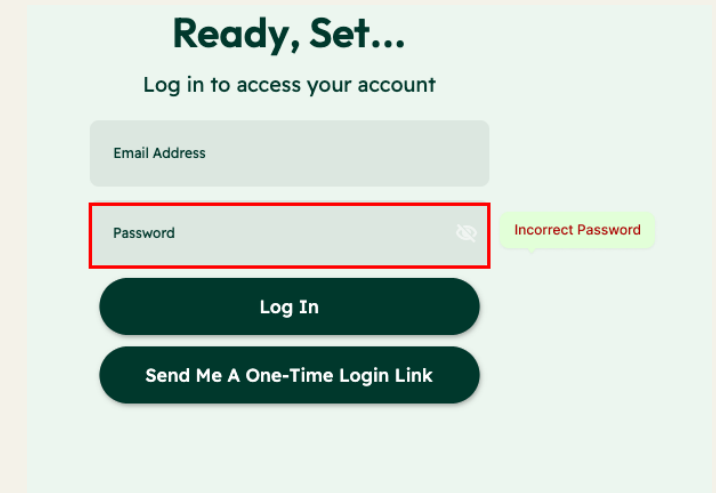

I recommended placing the correction beside the field where someone could act.

Original

The original login form is titled "Ready, Set..." and includes the instruction "Log in to access your account". It features two input fields: "Email Address" and "Password". Below the fields are two buttons: "Log In" and "Send Me A One-Time Login Link". The form is set against a light blue background.

Proposed

The proposed login form is identical to the original but includes an error feedback mechanism. A red rectangular box highlights the "Password" input field. To the right of this box, a green message bubble contains the text "Incorrect Password". The rest of the form, including the title, instruction, email field, and buttons, remains unchanged.

Original page-footer error

The original page-footer error message is displayed in a dark grey bar at the bottom of the page. It contains the text "Error: Invalid login credentials" in a white, sans-serif font.

Findings ready for backlog planning

I presented the evaluation and recommendations, then helped turn the findings into a UX improvement list.

22 NOV 2023

Desktop evaluation

Navigation, hierarchy and error recovery

27 NOV 2023

Recommendations report

Specific interface changes and rationale

03 DEC 2023

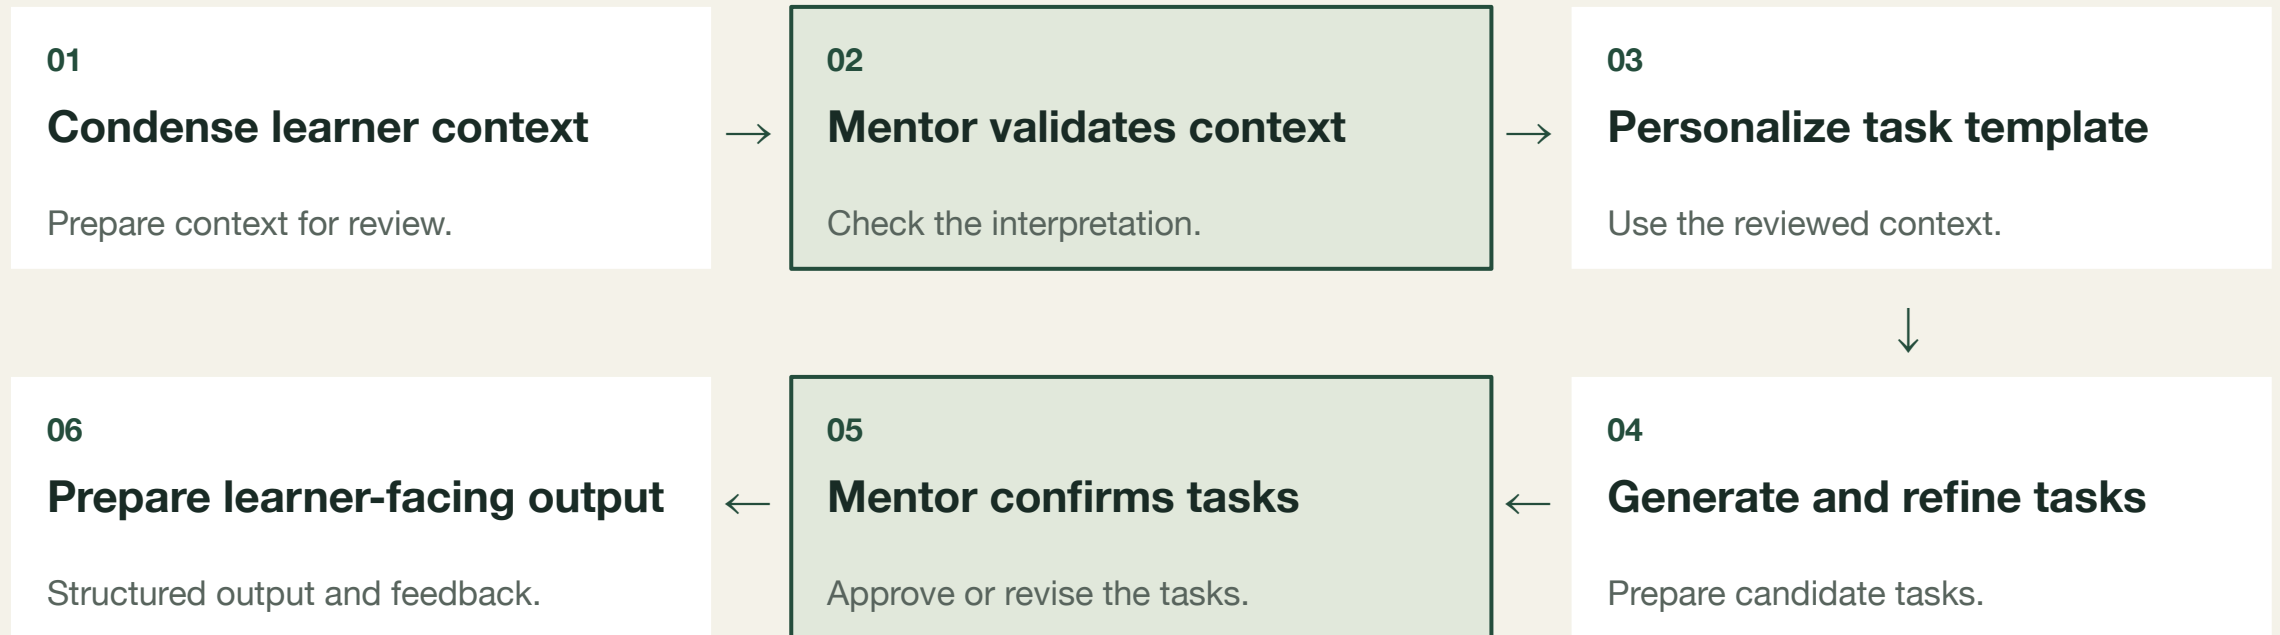

Presentation

Improvement list started for backlog planning

I collaborated on Figma mockups. Lead designer Megan led the later design refinements.

Human review before learner-facing tasks

A staged prompt workflow for personalized learner tasks.

Simplified reconstruction · Documented proposal; no deployment or measured efficiency claimed.

One workflow decision to investigate

Choose one intake or handoff question with Product and domain specialists. Study where a patient, provider or operator loses context and what they need to decide next.

Combine interviews and task observation with relevant survey or product signals. Test a focused concept, discuss the limits, and let privacy and domain constraints shape the study.

Let's make the next decision clearer

Interested in Bask's UX Product Researcher role. Based in Mesa, Arizona; available for U.S. remote work and ready to start as soon as possible.
